Introducing Steelman's Venturi Diffuser (U.S. Patent No. 5,857,455)

Our Venturi Diffuser circulates the oven atmosphere to cool the burner gases before they enter the oven and contact your parts. *Our competitors are still using fire.* The Venturi Diffuser combined with Top/Down Heating (Patent No. 5,351,632) and Rate Control (Patent No. 5,189,963) assure that your parts will not be overheated in a Steelman oven.
